# The Overpopulation Problem

*by Edith Beldi, Switzerland (translated by Willem Mondria, Switzerland)*

There are too many human beings.  
This claim is based on facts.

Our planet Earth could support 529 million human beings problem-free. Each and every living being, be it plants, animals or human beings of all races and peoples would have conditions that are fair for all to develop.

But we already have 5.9 billion human beings (in 1993) which the planet Earth has to support (7,503,846,002 on December 31, 2005 at 00:00). (9,248,028,002 on December 31, 2021 at 00.00).

The resulting and future problems which the entire human race will be confronted with will be unpleasant ones. We are already seeing the effects in the form of earthquakes as well as flooding brought about by climatic changes etc., which cause great suffering over the entire Earth. The series of environmental catastrophes will not stop because Earth is defending itself in its own way just like how any other living being would defend itself when exploited.

To pursue a policy that is only based on taking cannot have good results in the end. Earth must be able to regenerate itself, but that is a difficult or rather an impossible undertaking when it is populated with 5.9 billion human beings (7.5+ billion in 2006) who naturally all want to have their needs, e.g. food, clothing, warmth, shelter etc., satisfied which is of course everyone's right.

Just imagine: In 1993 six human beings were born every second and five of these were born into a new suffering, putting an even heavier burden on nature.

The planet Earth is also a living being with rights and obligations which it would also like to fulfil; we human beings prevent it from doing so because we have forgotten our own rights and obligations. We not only owe something to our landlords and fellow human beings, etc. but also to Earth. We have lost this immensely important wisdom and only a diminishing small number can still remember fragments of this. Unfortunately those are not the ones who have the power to bring this awareness back among the peoples. But every human being has the possibility to change their situation and to direct their thinking in this direction. Each individual can think about the problem of overpopulation and find ways to contribute to solving this problem. For example, each human being could set themselves the goal of choosing not to marry before the age of 30; in view of the seriousness of the problem they could decide to have only two children.

Thus every human being can carry out a correct family planning which takes into consideration the economic situation, the opportunities of earning an income, the children's educational opportunities etc.

What each individual does is important regardless of where they live. When anyone does something, then it influences those around them and spreads, just as a corn seed produces an ear of corn with dozens of new seeds.

By the time governments really tackle the problem, it will already be too late. Those who are in power bask in their positions – it doesn't concern them, they have a house with a garden and enough space for their personal development.

Perhaps some human beings think that the population could be reduced through wars and diseases such as AIDS, but that is not the solution of the problem. Many human beings suffer because of war and lose their friends, relatives, loved ones etc., who all have an important task in life which they are no longer capable of fulfilling. The human being's evolution is blocked because they no longer can be creative when occupied with the following worrying thoughts: "How do I obtain food? How do I protect myself? Where are my children? Where are my friends and neighbours? Where is my loved one?"

People who think that the population will be reduced by wars and diseases are making a big mistake. How many wars have already broken out on Earth that have brought suffering and misery

but no reduction in the population. In my opinion, human beings who think like this no longer have love in themselves and also make no effort to thoroughly think about the situation. Why are history books even written? For one reason only, namely to learn something from the past.

The sole solution for stopping the population explosion is for every individual to exercise restraint in regards to producing children; married couples should for example have only one child and not five to ten because the population problem affects and concerns everyone. This contribution is rather minor when one considers all the things that will happen to us if we don't do anything against the overpopulation.

If someday the point is reached where the population has reduced then a law must be enacted which allows up to a maximum of THREE children per family – but no more than three. This is very crucial and of great importance. If this number had been complied with, then it would never have come to an overpopulation problem like we have on Earth today.

## **Explanation of the 7 year birth-stop**

*by Christian Frehner, Switzerland (translated by Karl Beaney, England)*

<b>Allowed marriage age:</b>	<b>Female:</b>	<b>Male:</b>
	<b>25 Years</b>	<b>30 Years</b>

The age information mentioned above has validity for those persons who decide to enter into a life long bond after an engagement period, with or without the goal of a later wish to have children. The age restrictions are consciously set to this height, therefore the human beings have sufficient time to become grown up and are able to be aware whether they want to enter a bond or not. In addition there is sufficient time in order to learn one or more/several occupations and to become clear in which direction the life path shall develop.

The age difference between male and female arises from the fact that in a physical regard girls, as a rule, mature quicker than boys.

<b>Procreation age:</b>	<b>28 Years</b>	<b>33 Years</b>
-------------------------	-----------------	-----------------

The determination of this age information is based on the following procreation prerequisites.

### **Procreation prerequisites:**

#### **A) Existing marriage of at least 3 years**

Both of the marriage partners shall use this time in order to find out, in cohabitation, whether they really belong together, whether they feel/perceive in a fine-fluidal wise love for one another, or whether they have only married out of a being in love out of feelings - and whether they want to conceive a child.

#### **B) Proof of a harmonious and healthy marriage**

**&**

#### **C) Proof of a perfect lifestyle of the marriage partner**

This means that marriage partners have a good reputation/standing, which for example means; to be hard working, engage in no monetary mismanagement, no whoring/prostitution and so on and so forth.

#### **D) Proof of the child-education-capability**

There must be unobjectionable material conditions, so for example the security regarding nourishment, finances, accommodation and work and so forth, so that the child to be conceived will in all likelihood have a good chance of a childhood without misery and hardship. Patronised human beings, human beings with a so-called 'spiritual handicap' (Down Syndrome etc.), Schizophrenia (in the broadest sense), confused consciousness and so on are not capable from the outset to completely provide education of children, which also reaches into the next point:

#### **E) Proof of health: No hereditary and contagious illnesses, no drug-, medication- or alcohol-addiction and so on.**

This means that the marriage partners should not have any of the above mentioned illnesses and both have to undergo medical tests. For this purpose the medical and gene technology research is to continuously progress in order to, on the one hand, therethrough be able to continuously make better and more refined diagnoses, and on the other hand in order to continuously develop better remedies as well as methods in order to make or correct damaged/ill genes ineffective and so on. If one has 'liberated' himself/herself from an addiction then at least 7 years must have passed since the last intake of drug- or medication-ration without a single relapse. With regard to smoking both marriage partners must have been totally abstinent for at least 18 months.

#### **F) No affinity to extremist and hostile-to-the-state groups**

Associates of extremist and hostile-to-the-state groups offer no guarantee that their children will receive a neutral education. They are not capable to recognise or acknowledge the sense and the necessity of laws and regulation and to allow their children to grow up to become neutral- and self-conscious-thinking human beings and citizens.

If both marriage partners come to the cognition and decision after the sequence of 3 years to feel love for one another and to be ready for the procreation of a child they could submit a request to the state regarding this, after which its representative examines the request in a neutral form and would have to approve this without bribery, without nepotism and without race-discrimination and so on, as long as the descendant-procreation prerequisites are fully met.

#### **Maximum number of descendants: 3 per marriage**

If the approval for the procreation of a child has been issued and the desired success does not materialise (i.e the women does not become pregnant) then 2 possibilities are given:

- a) A fertilisation is to be supported through medical assistance/help, in which case this help can extend to the unification of the sperm and the egg (of the marriage partners) in the test tube with subsequent implantation in the uterus. Insemination by others or surrogacy are allowed under no circumstances.
- b) An unknown child is adopted or taken into care. Children from one's own country/cultural circle and of the same race have first priority, and only secondarily those from different and therefore foreign countries and other races.

A number of 3 descendants (and/or adopted- or rather foster-children) guarantees that all children of a marriage receive sufficient attention and that the woman is not misused as a 'birth machine'. (Fundamentally and normally there should be a break of 3 years between the birth of one child and the conception of another, to protect/preserve the bodily powers of the mother.)

As long as a birth stop is necessary or remains in force, the above mentioned number of 3 offspring per marriage will only be reached in exceptional cases (for example with twin- or triplet-births and so on). An example of the 'most favourable' case with a woman who wants to have children is: Conception and birth at 28 years old; 7 year break; a second child at 35 years old; 7 year break; third child at 42 years old (in which case it is to be said that a woman should no longer conceive children after the age of 40). - So a one- or two-child family becomes the norm, which is really also the purpose of this measure.

**Birth-stop interval:****7 year: Complete birth-stop worldwide****1 year: Procreation-permission according to permission-template****7 year: Complete birth-stop worldwide****1 year: Procreation-permission according to permission-template****Repeated: Implementable until the reduction of the terrestrial humanity has achieved the normal-state.****After that: Permission-template remains in force for marriage and for procreation of offspring, in which case however the seven-year-cycle of the birth-stop is cancelled.****Remains in place: 3 offspring per marriage (or 3 foster- or adopted-children).**

Naturally it would be irrational to carry out such a 7 year birth-stop on the entire Earth uniformly and simultaneously. No, only a staggered arrangement guarantees that a breakdown of entire sectors of industry or social-realms do not take place (Keywords: teaching professions, apprenticeships, articles for babies/childcare products-manufacturer, maternity wards/midwives and so on.) and a catastrophe is triggered. This staggered arrangement must be uniform/consistent and applies for all countries of the Earth. The variants 1 and 2 listed below are only examples of how such a division could be made. With variant 1, for example, this means that in the first year of the introduction of the birth-stop, marriage partners with the first letters in the family name of A, B, C and D (e.g **A**ckermann, **C**linton etc.) receive the permission for the procreation of a child. In regard to China, a division according to variant 2 would probably have to be determined because many family-/surnames begin with X, Y or Z there.

For a simple, correct and safe carrying out of a staggered birth-stop it is absolutely necessary to have a world-world decision that the name of the man of the family determines the name of the children (as this was and is the case in most cultures since ancient times, and what makes it possible to determine the family tree of a human being, in order to therethrough avoid incest [inbreeding]). This regulation is not intended to undervalue or demean women, women and men are absolutely equal in their Wesen.

	<b>Variant 1</b>	<b>Variant 2</b>	<b>further variants</b>
1st year	<b>A, B, C, D</b>	<b>A, H, O, V</b>	
2nd year	<b>E, F, G, H</b>	<b>B, I, P, W</b>	
3rd year	<b>I, J, K, L</b>	<b>C, J, Q, X</b>	
4th year	<b>M, N, O, P</b>	<b>D, K, R, Y</b>	
5th year	<b>Q, R, S, T</b>	<b>E, L, S, Z</b>	
6th year	<b>U, V, W</b>	<b>F, M, T</b>	
7th year	<b>X, Y, Z</b>	<b>G, N, U</b>	

What can the individual human being do now in regard to the above mentioned explanation and measures?

Unfortunately, the governments of the Earth, but also the majority of the peoples, will probably not bring forth the insight and power of action for some time to come to tackle the problem of the overpopulation by the roots and carry out an effective birth stop (according to the template of the FIGU). That is why only one way remains for the rational and self-responsible conscious individual human beings, namely to follow these measures for him/her self and to use them therefore according to one's best ability. All human beings in responsible and authority/determining positions are especially called upon, to be or to become conscious of their responsibility and work towards it so the understanding for these measures continuously grows. The human beings have

it in their hands which way they want to choose, whether they want an imposed one/choice (through hunger, misery, catastrophe and so on.) or a self-chosen one.

It is now important not to be intimidated by the outcry of all those short-thinkers and irrational ones, who do not recognise or want to recognise the seriousness of the situation and indulge/wallow in egoism and false humanitarianism which inevitably leads to ruin. Unfortunately, very many human beings will still be falling down with the branch they have just sat on and cut off themselves.

Every human being is free to make one's own thoughts himself/herself about what is mentioned above. There are years of hard deprivations ahead of us and in many things we will have to rethink and accept restrictions. But let us always keep in mind: we act for the wellbeing of the planet, the fauna and flora and particularly also for the wellbeing of our children and grandchildren - and consequently also again for our own wellbeing.

## Population table

*By Barbara Harnisch, Switzerland (translated by Karl Beaney, England)*

The following table gives information about how very overpopulated the Earth is. Many human beings ask how we precisely arrive at the number of 529 million and for this reason it is also interesting to know more. The number of 529 million human beings populating the Earth is calculated by means of the size of the planet, its arable land (therefore without mountains, seas, city- and industrial-areas and so on) and the living space which the human beings and also animals and plants need for free life-unfolding/development. A 5 person family needs about one hectare of land for gardening and self-sufficiency and in order to be able to move freely. One square kilometre of fertile land is calculated for 12 human beings. Resulting from this is that a relatively small land can nourish more human beings under circumstances, because the proportion of arable- and grazing-land is much higher than in a larger piece of land with very little arable- and grazing-land.

Example - Afghanistan

Arable land = 135,974km<sup>2</sup> x 12 = 1,631,692 = possible population. The actual population of Afghanistan is stated as 16.9 million. That means Afghanistan is overpopulated 10 fold.

Unfortunately the table provided here is not complete, for to do this correctly the actual population as well as the x-fold overpopulation would have to be listed for each country, but we left that out for the simple reason because in all the reference books that give information about this theme different numbers are stated. Moreover the number of the humanity increases so terribly quickly, not to mention the huge number of 'home births' and not registered births, that a reasonably accurate figure is impossible.

The calculated population of about 562 million human beings deviates from the stated Earth population number by about 6% because infertile land was made arable and the data in the reference books is only approximate.

Country	Area (km <sup>2</sup> )	Arable land (%)	Grazing land (%)	Possible population

**Note:**

The original German booklet was published in March 1994. The data used for that publication was as correct and current as possible, at that time. Since then the dissolution of the Soviet Union (USSR) has taken place, as well as other countries being formed and/or changed, such as East and West Germany uniting. We have, largely, used the values given in the original booklet with the addition of all current country names. If no information is given for a country then it was not included in the original booklet. We will endeavour to complete the table in due course.

# Birth Control Among Animals in Contrast to Human Beings

by Freddy Kropf, Switzerland (translated by Willem Mondria, Switzerland)

In contrast to human beings, animals appear to have a greater advantage when it comes to birth control. This is true only as long as human beings do not interfere with the laws of the animal kingdom and violate or destroy them. Many of the animal and behaviour researcher's observations have demonstrably shown that there will never be such an incredible overpopulation in the animal kingdom as there is at the present time with human beings. The measures to regulate births among animals are quite severe, manifold and ingenious. They extend from chemically generated scents which work like birth control pills, to cannibalism and even mass suicide as seen with the mountain lemmings in Scandinavia. After years of intense reproduction the lemmings form themselves – due to a lack of food – into a million strong herd and begin a long journey. (Lemmings are normally solitary and very aggressive animals and come together only during the mating season.) The unusual closeness in the herd increases each lemming's aggressiveness to the point where the herd degenerates into a total mass hysteria. The herd then drowns miserably by making a suicidal plunge from a cliff into a sea or river. Only a few lemmings survive this mass suicide ensuring the preservation of their species. Other birth control measures were also observed with various species of birds such as blackbirds: When there are favourable conditions in the environment a blackbird lays up to 5 eggs. If the blackbirds become overpopulated then only two eggs are laid. Experiments with various bird species have shown that when the eggs are removed, then they are laid again in order to reach the number that the environment can support. The great tit lays 14 eggs in total, the gold woodpecker 72, and the mallard duck lays almost 100 eggs. Our chickens lay an egg every day, up to 270 a year. Ethologists in Australia have observed wild rabbits in times of drought and food shortages, and found that the males no longer showed interest in the females; on extremely hot days the pregnant females even rejected their young and miscarried since the young wouldn't be able to survive in the heat anyway. The elephant's birth control measures are such that when they are living together in an unusual high density then they simply adopt a new rhythm in their sexual behaviour. The normal time span between birth and the next mating is two years and three months. When the density of elephants is unusually high then the time span of sexual abstinence increases by a factor of three to six years and 10 months.

A particular scent that functions like a birth control pill is probably the most widespread type of birth control. It can reduce or even stop the fertility in various animal species such as mice. This anti-baby scent is given off by each female. As soon as there are many females living together the scent increases in strength and the females become infertile. Only under particular conditions can the male scent reverse this development.

These few examples out of many should stimulate the reader to reflect. If the human being were to live more according to the natural laws and recommendations related to the Creation and not stray further away from them then we would not have such an enormous overpopulation explosion and its accompanying ever increasing gruesome effects. If animals were to trample on the natural laws, like human beings do, then in all likelihood there would very soon be no living creatures existing on this planet.

## Be fruitful and multiply...

by Hans Georg Lanzendorfer, Switzerland (translated by Willem Mondria, Switzerland)

(a short version of this article was published in the Schaffhauser Arbeiter Zeitung (Schaffhauser Workers Newspaper) on August 21, 1993)

*Subject: Come and hear god's word...*

*and other recent large-scale attempts of Christians at missionising as well as more on the subject of overpopulation and cult-beliefs*

Be fruitful and multiply and fill the earth

Genesis, chapter 1, verse 28 and Genesis, Chapter 9, verse 1.

A divine command? No! Rather an exceedingly ill-considered statement stemming from some power-hungry and ignorant hack-writer of the bible or from a simpleton or fool who consciously

acts against the laws of Creation and who does not recognise the limited space on the world that was allegedly created for him by his god. This present or modern age murderous and untenable divine command which calls for an absolute uncontrolled and incalculable simple increase of human beings - which is still promoted by the pope and his Christian supporters - must be, in this form, put on the same level as genocide, mass murder and extermination of a planet without parallel. This behaviour causes an unforgivable destruction on Earth as well as a mass murder of all of its living forms of life, the fauna and flora and the entire humanity.

The inevitable worldwide complete overexploitation and unscrupulous exploitation of natural resources is the result from such an explosive, "divinely ordained" and religiously promoted uncontrolled reproduction of Earth's population. Serious famines are the future consequences and the polluted air and environment caused by the overpopulation destroys the human being's essential natural living space. To still defend or live according to such irrational divine commands calling for the uncontrolled reproduction of human beings testifies to an indescribable stupidity, ignorance, false humanitarianism, incorrect humility and religious short-sightedness. It is, moreover, an indescribable impudence without parallel to describe the elemental might, the Creation, as "god" or to call it "godlike" as well as to impute cruel, human and paradoxical traits to it that only human beings have.

The mass of human beings were driven to boundlessness through irrationality and through the human race's religious, unnatural false doctrines, whereby the limited and controllable problems of a few human beings have increased to a nameless mass and have become uncontrollable.

The preservation of the human species is not based on the formula of simple reproduction as promulgated by the many false doctrines of the religions on Earth. The preservation of the species lies in following the natural laws, thus it is a compliance in holiness (controlling) and has to comply with the given space limitations of this planet. Science also states that 529 million human beings with a maximum of three children per couple may eke out their existence on planet Earth in order to be capable of doing justice to their development as true human beings. These values are calculated from our planet's available cultivatable land. Nature, however, never, and under no circumstances takes its cue from any religious scatterbrains who call themselves loudmouthed priests, lay preachers, missionaries, bishops, cardinals, popes or believer in god or believer etc. who call for an uncontrolled reproduction of human beings.

Every sensible and conscientious human being of this world who still has a strong enough sense of responsibility towards the planet and its humanity knows about the importance of sensible birth control and family planning. For this reason no one would want to have more children than he or she is capable of feeding and being responsible for. Even when the Christian world still opposes contraception and views having as many children as possible as a "gift from god" and not as a product of their own procreative act. Nevertheless, contraception, in whatever form belongs to the human being exactly in the same way as his or her sexuality does, because even the alleged world and nature "personally" created by god, prevents and hinders the reproduction of living things, e.g. by having an innumerable number of seeds go to waste when the wind blows them onto rocks instead of fertile ground. Contrary to all the stubborn claims made by those human beings of the Christian faith, nature does demand human beings to conceive every time they have sexual intercourse. As a result the producing of descendants requires calculated planning.

The planet's overpopulation (14 times greater than the allowed maximum) is the origin of all troubles and suffering seen on this world even when the clerics, the pope and the entire clergy as well as all the rest of the pro-religious and delusional believers deny this in their delusional belief, and they, in their cult-belief, still vehemently defend against contraception. Worldwide, 12 children are born every two seconds. In comparison to this there is only one death in the same time period. Having a large as possible number of church tax payers is apparently much more important to the church and religious bigwigs than effectively reducing the troubles in the world and in the so-called third world countries through measures that regulate births. On the basis of the papal paradox it is time to open the eyes and to see through and recognise what has been constantly going on for millenniums - the conscious stultification of human beings by the Christian world and its priesthood through which the human being to this day, by means of force and oppression, was and is kept in dog-like humility.
